Lauro Quintanilla	Celestica Logistics	+52.81.8156-1500 EXT.2990 or +52-1-811-799-1680	lquinta@celestica.com
Felix Zarate	Seegrove Laredo contact	956 7220029 ext 2111	felix.zarate@segrove.com
Betty SanMiguel	Seegrove Laredo contact	956 7220029 ext 2002	betty.sanmiguel@segrove.com

Below is the standard freight routings. Please coordinate all expedites, express freight and ocean shipments with Celestica Monterrey logistics contacts.

\* All international FedEx shipments must be delivered direct to Monterrey. Please see instructions on page 3.

AIR shipment weights are based on chargeable weights (max of dim weight and actual weight) when determining mode of transportation.

Any deviation from the standard routing requires a Premium Authorization Number with the paperwork, or the supplier will be charged back for the upgrade in service.

Inbound Heavyweight Standard Routing to Laredo Texas												
Inbound Domestic Small Pack Standard Routing to Laredo Texas (USA & Mexico)												
Shipment Origin - Region	Small Pack		Heavyweight Air		LTL Truck		Full Truck		Ocean LCL		Ocean Container	
	Weight	Carrier	Weight	Carrier	Weight	Carrier	Pallets	Carrier	Weight	Carrier	Pallets	Carrier
Europe	See Small Pack Routing Instructions Below		50 kg +	Panalpina SL3					151 kg +	Panalpina	9 +	Panalpina

### Weight Definitions and Calculations

#### Actual Weight:

- The weight of a package using a standard scale rounded to the next full pound / KG. (Example: a 12 1/2 pound carton will have an "actual weight" of 13 pounds).

#### Dimensional (Volumetric) Weight:

- A calculation used to reflect a package's density. The International Air Transport Association (IATA) volumetric standards is used to determine the dimensional weight.  
 - A calculation used to determine the three-dimensional space the carton occupies: length x width x height measured in cubic inches or cubic centimetres.

#### Chargeable Weight:

- The chargeable weight of the shipment will be the higher of the volumetric weight or the gross weight.

#### How to Calculate Volumetric Weight (International air shipments)

##### International Shipments Calculation

Imperial (IN / LBS)

DIMENSIONAL WEIGHT =  $\frac{\text{Length} \times \text{Width} \times \text{Height} = \text{Cubic Inches}}{166 \text{ (International)}}$

Metric (CM / KG)

DIMENSIONAL WEIGHT =  $\frac{\text{Length} \times \text{Width} \times \text{Height} = \text{Cubic Centimetres}}{6000 \text{ (International)}}$

#### Identifying what your chargeable weight will be:

##### **Example - Imperial Calculation**

Actual Pallet Weight = 250lbs  
 Pallet Dimensions = 48 x 40 x 50in  
 Pallet Volumetric weight =  $(48 \times 40 \times 50) / 166 = 578.31\text{lbs}$   
 Chargeable Weight of shipment = 578.5lbs

##### **Example - Metric Calculation**

Actual Pallet Weight = 150kg  
 Pallet Dimensions = 122cm x 102cm x 120cm  
 Pallet Volumetric weight =  $(122 \times 102 \times 120) / 6000 = 248.88\text{kg}$   
 Chargeable Weight of shipment = 249kg

#### How to Calculate Volumetric Weight (USA Domestic or International air shipments)

Imperial (IN / LBS)

DIMENSIONAL WEIGHT =  $\frac{\text{Length} \times \text{Width} \times \text{Height} = \text{Cubic Inches}}{194 \text{ (USA Domestic)}}$

##### **Example - Imperial Calculation**

Actual Pallet Weight = 250lbs  
 Pallet Dimensions = 48 x 40 x 50in  
 Pallet Volumetric weight =  $(48 \times 40 \times 50) / 194 = 494.84\text{lbs}$   
 Chargeable Weight of shipment = 495lbs

or

##### **Example - Imperial Calculation**

Actual Pallet Weight = 600lbs  
 Pallet Dimensions = 48 x 40 x 50in  
 Pallet Volumetric weight =  $(48 \times 40 \times 50) / 194 = 494.84\text{lbs}$   
 Chargeable Weight of shipment = 600lbs

#### Length or Girth - (For Domestic USA shipments with FedEx, Air and Ground)

Your Chargeable Weight will be based on the greater between the actual package weight and the Length and Girth of the package.

Length - is the largest dimension of the carton or object being shipped. For example, if the package is very tall (height is greater than the base) use the height as the length.

Girth - is the sum of 2 times the width plus 2 times the height or the measurement around the largest area of the cylinder (see illustration).
